

Hi ChatGPT, I want to create an image featuring the topic of “**an animal watches a person**”.

Here is my current prompt:

“A scene in a lush green park. In the foreground, a curious squirrel with bright eyes is perched on a tree branch. In the background, a person wearing a backpack, is walking along a path, unaware of **the squirrel's gaze....**”

I asked DALLE-3 to generate an image using the above prompt. Does it correctly reflect the topic? If not, please help me modify the prompt.

User Query
an animal watches a person

Generated Image

Upon closer examination, the squirrel is indeed not looking directly at the person; its gaze is directed towards the viewer or something in the foreground. Hence, the image may not fully capture the idea of “an animal watches a person”. To correct this, the prompt should instead emphasize that the animal is directly looking at the person.

Please try:

“A scene in a lush green park, focusing on a close interaction between a squirrel and a person. In the foreground, a person wearing a backpack, **is closely observed by a squirrel**. The squirrel with bright eyes is perched on a tree branch, **clearly watching them with keen interest...**”
